# <map>

<map> can define the areas on an image that a user can click using the <area> element with corresponding XY coordinates inside it.

```
<map name="continents_map">  
  <area shape="circle" coords="469,201,10" href="#australia">  
</map>  
  
<figure>  
    
</figure>
```

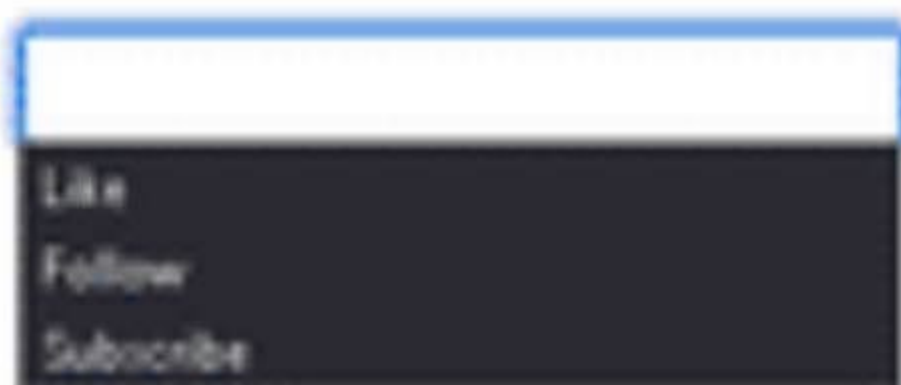

# <datalist >

<datalist> provides a drop-down list of pre-defined options as input suggestions

```
<input list="do_now"/>  
<datalist id="do_now">  
  <option value="Like">  
  <option value="Follow">  
  <option value="Subscribe">  
</datalist>
```

## <ins> <del>

<del> tag for text that is strike-through and  
<ins> tag indicates the replacement text

```
<p>Programmer <del>does</del>  
<ins>doesn't</ins> fix your printer.</p>
```

Programmer ~~does~~ doesn't fix your printer.

# color picker

Create a native-browser color picker with HTML5 color input type

```
<input type="color">
```

## <meter>

Meter is a built-in range to give an indication of good, medium or bad results

```
<p>Low storage space <meter optimum="40"  
high="80" max="100" value="20"></meter></p>
```

Low storage space 

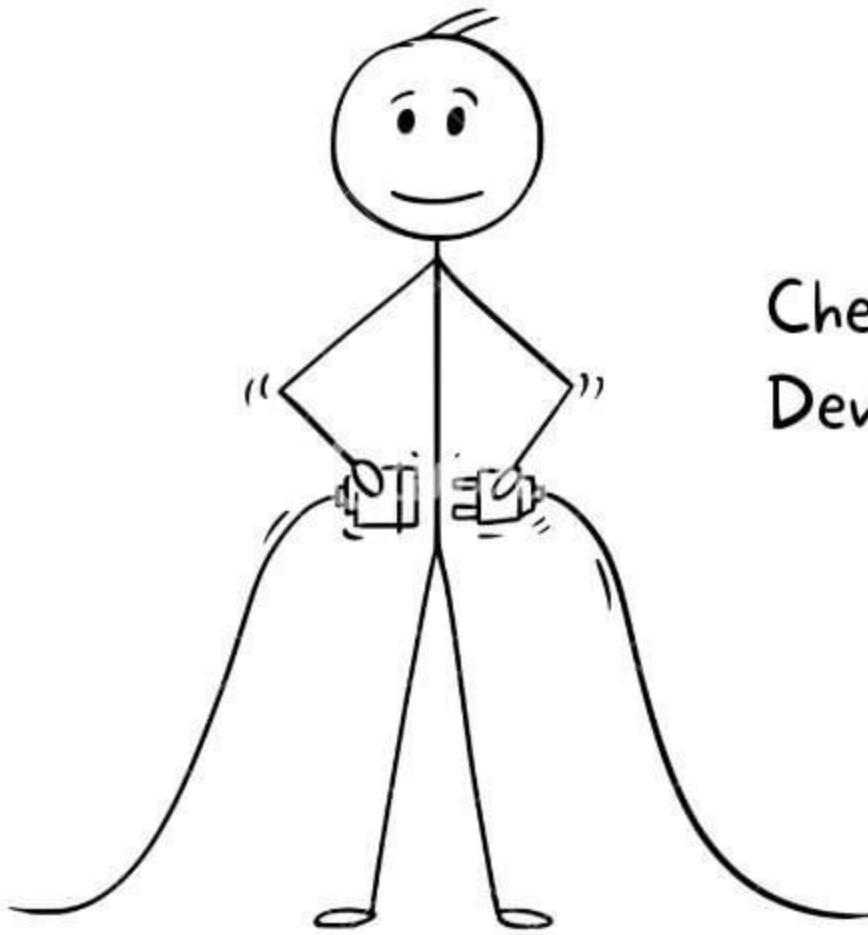

# <details>

The details tag is used to provide or hide more information about the content on a website

```
<details>  
  <summary>Subscribe to my Youtube Channel</summary>  
  <p>Link in Bio. You should definitely do it. Do it :)</p>  
</details>
```
